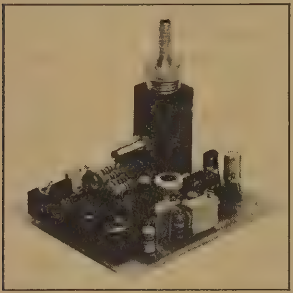
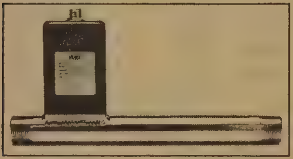
OEM PRODUCTS

Kurz manufactures a wide line of basic airflow and mass flow transducers and is always eager to work with you on your OEM product requirements.



SERIES 501
Micropower Mass Flow Meter
The 501, the worlds smallest commercial mass flow meter, measures flows up to 5 slpm. The 501 is perfect for biomedical toxicology and instrumentation applications.

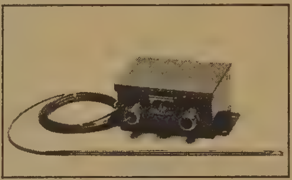


SERIES 565
DC Powered Mass Flow Meters
The compact 565 Series include linear 0-5 VDC outputs and are most often specified for flows from 10 sccm to 10 scfm. Popular with OEM's, the economical 565 operates on 15VDC.

SERIES 435DC
Linear Air Velocity Transducers
Powered by 15VDC, and available in self contained, bare board with cable and rack mount configurations, the 435DC features a linear 0-5VDC output.

KURZ
INSTRUMENTS INC.

SERIES 430DC
Air Velocity Transducers
Powered by 15VDC, the self contained 430DC features a non-linear 0-5VDC output.

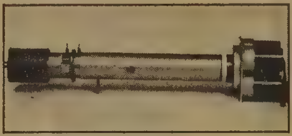


SERIES 430DC-VF
RS422 Frequency Output DC Powered Air Velocity Transducers
The 430DC-VF features a RS422 compatible output where 12KHz to 60KHz corresponds to zero to full scale. The high frequency output allows two-wire runs to lengths of several miles. The 430DC-VF operates on 15VDC, has 15 ft. of probe cable and a NEMA 1 electronics enclosure.

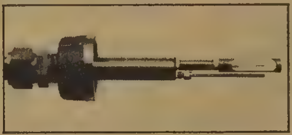
SERIES 280
Micropower Mass Flow Controlled Air Sampler
A miniature flow controller, the 280 combines the worlds smallest commercial mass flow meter, the 501, with the worlds smallest rotary carbon vane vacuum pump, the Series 290, to produce a compact, mass flow controlled, air sampler. The 280 can also function as a mass flow controlled gas supply, and can be computer controlled via an external setpoint feature.

AIR VELOCITY

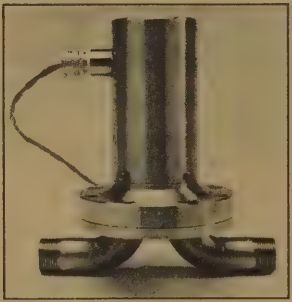
SERIES 415
2-Wire Linear Air Velocity Transducers
With linear 0-5 VDC outputs and 2-wire runs to over 1,000 ft., the popular 415 provides an industrial grade application solutions anywhere air flow is measured.



SERIES 400
Air Velocity Calibration Systems
Complete benchtop wind tunnel systems for calibrating a variety of air flow instrumentation and sensor.



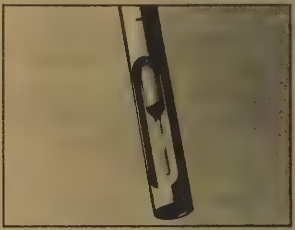
SERIES 455
Stack Velocity Transducer
The 455 is designed for operation in the harshest environments and features Kurzs new all metal sensor.



SERIES 730
Electric Rotary Ramp Metering Valve
A major breakthrough in valve technology invented by Dr. Kurz. This exclusive valve features single turn operation and a linear Cv from 0 to 100% of flow. The **730** Series valves alone allow new achievements in precise mass flow control.

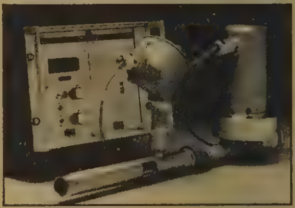
MASS FLOW

SERIES 505
In Line Mass Flow Meters
Previously complex measurements are now made simple with Kurz mass flow sensors. Linear outputs, 2-wire hookups, NBS calibrations, corrosive gases—the 505 Series does it all!



SERIES 515/555
Insertion Mass Flow Meters
For larger pipes, the economical 515 Series includes a ball valve/retractor assembly designed for hot tapping into existing lines. Weld on the fitting, drill a hole in the line, insert the probe and you're ready to go!

MASS FLOW CONTROL



Kurz **7500** Mass Flow Control system are composed of a Kurz **505** Series Mass Flow Meter, a Kurz **710** Series Electric Valve P.I.D. Controller and a Kurz **730** Series Electric Rotary Ramp Valve.

Many more state of the art Sensor and Transducer Systems are available from Kurz. Kurz Mass Flow Technology makes complex measurements simple. Call one of our Applications Engineers today.

Rugged Aluminum Structural System Reduces Design and Construction Costs

AMCO's heavy-duty aluminum structural system offers a simple method of designing and building enclosure frames to special size and high strength requirements while significantly reducing your design cost. AMCO's unique system features a selection of 1½" O.D. aluminum extrusions with 14 mounting flange combinations and 8 types of cast corners. These structural frame components provide the versatility to create odd-shaped and non-standard sizes and configurations. When reinforced with standard bolt-on gussets, the frame assembly can meet MIL-E-5272C shock and vibration requirements. AMCO's gusseting technique is stronger than welding. Complete aluminum enclosure assemblies can also be provided by AMCO, often saving additional costs by using standard panel components, doors and accessories.

Keep a small inventory of AMCO's aluminum components on hand for an inexpensive and versatile method to prototype designs. The aluminum system is especially suited for environmental, mobile, anti-magnetic, military and commercial applications. Components are readily available preassembled or unassembled from AMCO's inventory.

AMCO Cooling Devices Feature Maximum Air Delivery with Minimum Noise

AMCO's new line of attractive cooling devices is designed for quality performance, providing safety and confidence in the operation of your electronic equipment.

Choose from a wide selection of individual fans, tandem assemblies or fans premounted on panels to simplify mounting to enclosure frames. A new line of quiet centrifugal blowers provide greater air flow per space occupied.

AMCO panel mounted fans and blowers feature many choices of attractive, high tech finishes to enhance the aesthetics of your system. Variable speed controls are also offered as standard on many cooling devices. A broad range of accessories and hardware provides many mounting and cosmetic options. All AMCO fans and blowers are UR recognized. Fans are also CSA listed.

Air flow (SCFM) and noise level (dB) ratings are available for all AMCO cooling devices. These documented test results were obtained in AMCO's Cooling System Laboratory which is equipped to also solve problems for more sophisticated cooling needs. We invite you to discuss your special cooling requirements with our experienced laboratory personnel.

AMCO's Special Services Division Meets Your Special Needs

Your special needs for custom electronic enclosures or packaging can be met by AMCO's Special Services Division (SSD). Pictured above are examples of custom projects designed and manufactured for SSD customers—a plated card rack and a desktop cabinet with option for internal panel mounting, complete with provisions for convection air cooling and modified rear panel to accommodate wiring.

We recommend the initial step towards a design solution is to meet and become familiar with your requirements and applications in order to determine the most cost efficient approach to filling your request. Often, modifications to standard AMCO products and special finishes are all that are necessary to accomplish the task. Once a solution to your need is agreed upon, AMCO will provide a complete price and delivery quotation.

AMCO's SSD is equipped to handle most special design problems with extensive experience in environmental, shock, vibration, seismic and EMI problems encountered in various military programs, ground support, airborne and shipboard applications. PCB TAINERS

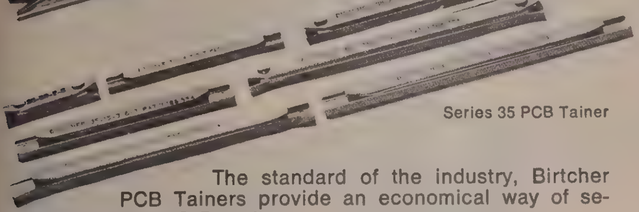
Series 15-20 PCB Tainer



Series 35 PCB Tainer

The standard of the industry, Birtcher PCB Tainers provide an economical way of securely fastening PC Boards.

Birtcher PCB Tainers come in standard or made-to-spec versions. They are made of cold rolled steel or beryllium copper for rivet, weld or adhesive bonding installation. They provide heat dissipation, electrical grounding, retention in shock and vibration applications and they accept PC boards from 1/32″ to 1/8″ in thickness. Finishes are available in cadmium, zinc, nickel, copper, gold, silver or ebanol and they may also be heat treated.

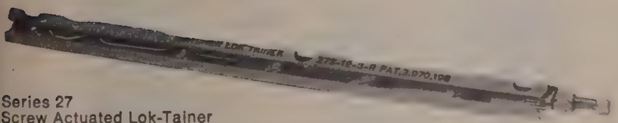
SERIES 15 THRU 20
Flared entry guides
Material .010 thick
2″ to 10″ lengths, .50 wide

SERIES 21
Flared entry guide designed for
high density applications
Material .006 thick
1″ to 6″ lengths, .190 wide

SERIES 35
With or without flared entry
Material .005 and .008 thick
2″ to 6″ lengths, .27 and .36 wide

LOK-TAINERS

Series 24
Lever Actuated
Lok-Tainer



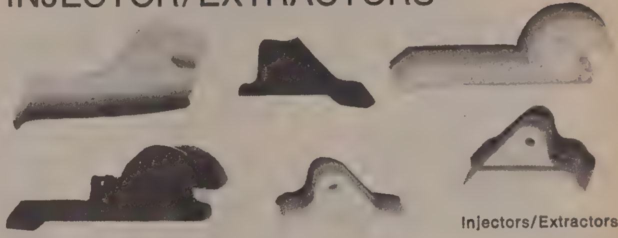
Series 27
Screw Actuated Lok-Tainer

Lok-Tainers are designed to provide extremely high resistance to heavy shock and vibration while maintaining maximum contact for heat dissipation. In unlocked position there is no resistance to insertion or removal of the PC board. This minimizes destruction of board surfaces.

SERIES 24 AND 25
Level actuated

SERIES 27, 28 AND 29
Screw actuated
Material .024 thick housing
Left or right hand
3″ to 12″ lengths

EXTRACTORS AND INJECTOR/EXTRACTORS



Injectors/Extractors

Extractors provide for quick, damage free, removal of PC cards. Injector/Extractors function in two directions allowing the card to be easily inserted into the connector as well as providing quick removal.

SERIES 60, 61, 64, 80, 82, 83, 84, 87
Material A.B.S. plastic and nylon

General Information

INTERLOK enclosures are designed for ease of assembly, versatility, and durability. Their modular design offers virtually unlimited electronic packaging flexibility. Standard Europa cards (100 x 160 mm, 3.94 x 6.40 in.) and card sizes derived therefrom are easily accommodated. With internal subdivisions, any card size can be used. In addition, all edge connectors currently in use can be fitted using supplementary assembly sections.

Materials

Aluminum extrusions form the framework of all INTERLOK cabinets. Front and rear panels are 3 mm clear anodized aluminum sheets. Cover panels are either 1.5 mm colored, vinyl coated aluminum sheet (models 10, 14, 32, 36) or 3 mm colored, vinyl coated alucobond (two sheets of aluminum separated by a polyethylene core).

Accessories and Colors

Front and rear panels are accessories on all models except 36, for which rear panels are included. Hinged and folding front panels may also be obtained in a variety of sizes for some models. Extruded front panels in various heights and widths can be used for plug-in modules. A number of different aluminum handles including fluted, shell, and U-handles are also available.

Cover panels are included on models 32 and 36. Standard colors are brilliant blue (models 10, 14, 36), neutral umbra-brown (model 32), and light blue (model 34). Turkish green, graphite black, and orange cover panels are available on some models for an additional charge. Perforated top and bottom panels may also be obtained.

Dimensional Units

The overall height of modules, card frames and plug-in cases and the acceptance height of cabinets is based on height units (E) per DIN Standard 41 494. One E equals 1¾" or 44.45 mm. The 19-inch insert width (483 mm) of the 19" floor cabinets corresponds to the overall width of 19" modules, 19" card frames, 19" cases and the 19" cabinet front panels.

The 5.08 mm (2/10") pitch unit T is used for the acceptance width.

New, Easy Assembly and Maintenance

Two sectional supports running full depth carry all inserts. These special supports permit versatile mounting with only simple assembly gear. The actual enclosure, which consists of front and rear frames and a top and base plate, has no supporting function. These parts are mounted on the mentioned supports using only four screws after the components have been inserted, wired-up and functional tests carried out. Therefore, no damage can be done to the cover plates during assembly.

The cover plates are of scratch-resistant Sinaplast and are available in neutral umbra-brown. Unfinished aluminum plates for customer painting can also be furnished.

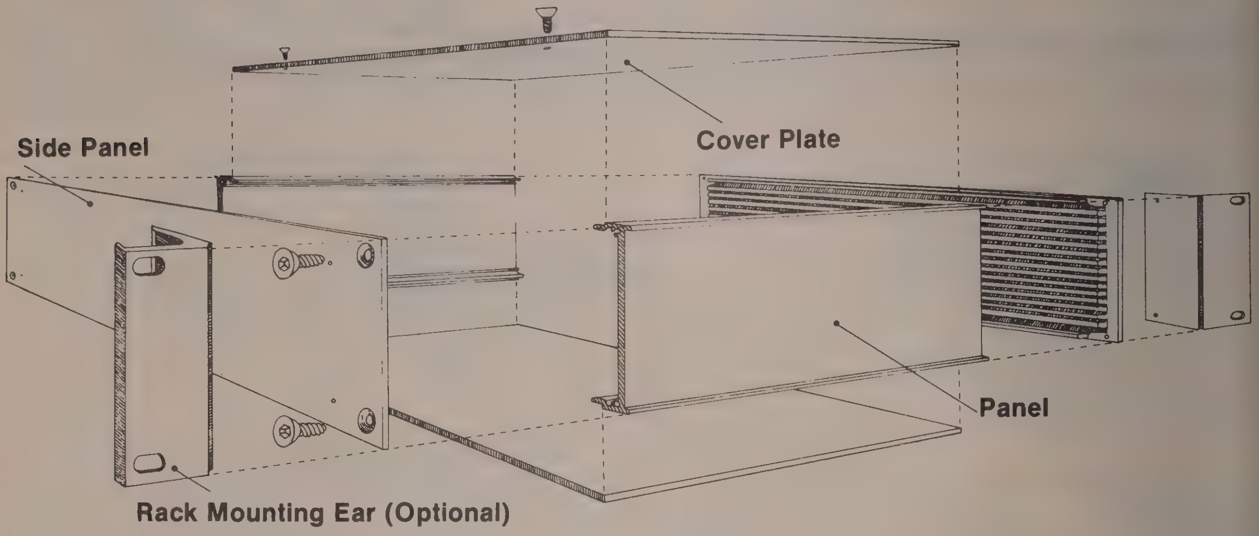
LANSING Series 89 Electronic Enclosure Systems



High Quality Cost Effective Design

Lansing Series 89 Electronic Enclosures combine engineered aluminum extrusion systems and sheet metal parts.

Modular Design
Enclosures are designed to be exact submultiples of standard rack width and height.

They can be used equally well as stand-alone or rack-mount instruments.

They group together easily both vertically and horizontally (with coupler option).

Simple in Concept
Each complete enclosure contains as few as 6 parts (2 each of side, cover, panel) plus hardware.

Parts are modular.

Easy to use, both in prototype and production quantities.

Mechanical Design
The frame is structurally rigid.

Panel area is maximized, recessed and surrounded by an attractive thin bezel.

Printed circuit boards can be mounted easily in a variety of ways.

Optima Instrumate

Instrumate is a chassis or a card cage or a combination of both. Every member of the frame includes mounting holes for the immediate insertion of Instrumate's optional secondary metalwork, snap-in card guides, card cages for top loading, and motherboards. Interior dimensions and card locations meet IEC/EIA standards for subracks. This is particularly advantageous to companies with international markets. Watertight Cases

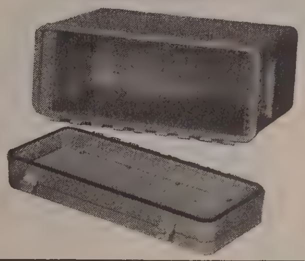
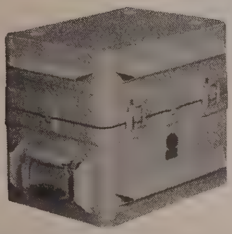
TA manufactures over 60 standard case sizes from 5″ × 9″ to 24″ × 42″ and can fabricate cases to custom sizes with no tooling charges. All TA watertight cases utilize the unique "Chevron Seal" to insure no leaks when submerged under 3 feet of water for one hour.

Consoliners for 19″ Rack Panels

TA consoliners mount 19″ NEMA/EIA rack panels from 5¼″ to 26¼″ high. Available with single or dual covers for access to rear connectors and controls, as well as tray compartments in one or both covers for accessory storage.



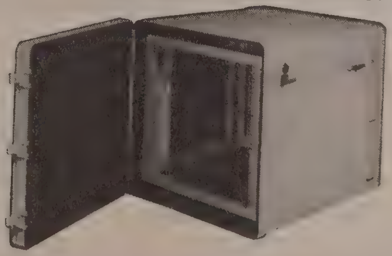


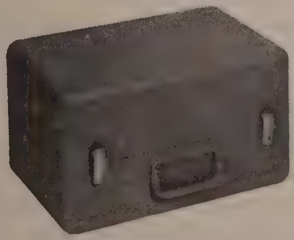
Military Cases

TA military cases are designed to meet or exceed the rigorous demands of applicable specifications such as MIL-C-4150, MIL-T-21200, MIL-T-28800, MIL-T-945 and MIL-C-4734 as well as MIL-STD-108 and MIL-STD-810. TA has supplied cases to one or more of these specifications to most aerospace prime contractors.

Isoliners

TA cases, with shock-mounted internal frames to accommodate 19″ NEMA/EIA panel-mounted equipment, absorb shock and vibration while still maintaining watertight integrity. Standard features include dual covers, automatic breather valves, and choice of bottom feet, casters, or fork-lift skids.





Econ-alum

Lightweight aluminum cases using a joggle interface to yield economical drip-proof transit cases. Recommended for light to medium-duty cases where submergence under water is not a requirement.

REAL RFI/EMI Shielding in new Tracewell Enclosures

New OEM computer enclosures injection molded of Mobay's* 40% aluminum flake-filled resin, Bayblend ME-6540, provide RFI/EMI shielding and maximum design freedom.

The material is flame retardant and provides 99.99% EMI shielding effectiveness. Its 50-45 dB attenuation over a 0.5-1000 mHz frequency range eliminates the need for further EMI processing.

System 15 enclosures are designed with overlapping joints, proper slot geometry, and positive electrical continuity throughout. Brass inserts join tops, bottoms, and panels for positive grounding. The aluminum flake is from Transmet

MINIGLOSSARY
ENCAPSULATION

MATERIALS/HANDLING

Catalyst: A substance which changes the *rate* of chemical reaction. Very small quantities can cause fast change.

Conformal coating Sprayed or dipped. A thin conformal jacket which protects an assembly from moisture or other degrading environments.

Curing agent: See catalyst.

Hardener: See catalyst.

Hermetic: A permanent gas-tight seal.

RTV: Room Temperature Vulcanizing. Associated with silicone rubber sealants which vulcanize at room temperature.

Thermoplastic: Plastic materials which can be made to flow *repeatedly* with the application of heat.

Thermosetting: Plastics which once cured cannot be made to flow again.

Thixotropy: The property of a coating compound which has low viscosity when agitated, but which thickens when the agitation ceases.

Viscosity: Measured in units of *poise* or *centipoise.* The property of a liquid which resists internal flow. Low viscosity equates with thin and vice-versa.

PROCESSING

Casting: Parts or assemblies are placed in a mold. Encapsulating material is added and cured. Part is then removed from the mold.

Dip coating: Part or assembly is dipped into the encapsulating material. Final thickness is determined by number of dips, viscosity, rate of withdrawal, and temperature.

Embedding: Wherein an encapsulant substantially fills all voids in and about an assembly.

Impregnation: A process of encapsulation involving evacuating all air and then allowing the encapsulating material to flow in and fill all voids.

Molding: Similar to casting except this process usually implies multicavity molds and costly machines.

Potting: Wherein the part or assembly is immersed in an encapsulating material contained in a shell which becomes a permanent outer surface after curing.

DIELECTRIC

Arc resistance: An encapsulant's resistance to the formation of a conductive path or track. Measured in time.

Breakdown voltage: The voltage at which an encapsulant fails electrically.

Capacitance: The property of conductors and dielectrics which allows the storage of an electrical charge when the voltage is applied.

Corona: A luminous discharge of electricity due to air ionization when a certain voltage is reached. Can be internal or external. The formation of ozone can cause rapid deterioration of certain materials.

Dielectric: Insulator (Nonconductor.)

Dielectric constant: The property of a material that determines its ability to store electrostatic energy.

Dielectric strength: The ratio of dielectric breakdown to the thickness of insulating material.

Dissipation factor: The ratio of a dielectric material's energy losses.

Flashover: Point at which an electric discharge occurs around an edge or across a surface. Can result in a carbon track and permanent degradation.

Insulation resistance: (IR) An insulating material's total DC leakage.

Surface resistivity: The resistance of the surface of an insulating material to the flow of direct current.

Voltage endurance: Sometimes called corona resistance. The ability of a material to withstand the application of sustained high voltage.

Volume resistivity: The resistance of a material to direct current flow as a measure of volume. Expressed as ohm-centimeters.

HumiSeal COATINGS FOR ELECTRONICS
GENERAL CHART OF PROPERTIES

Listed in this General Chart of Properties are ten of the most frequently used HumiSeal Protective Coatings and their principal properties. These have been tabulated in order to facilitate comparison of their characteristics and selection of the most suitable type for a specific application. In addition to these HumiSeal types we manufacture a variety of coatings for special purposes, including high temperature applications. Should none of the coatings listed in this chart fulfill your requirements, we suggest that you contact us for recommendations.

HumiSeal Protective Coatings are available in one-quart or one-gallon cans, five-gallon pails, or fifty-five gallon drums. HumiSeal types 1B15 and 1A27 are also available in 12-ounce aerosol containers. All HumiSeal types listed in this chart may be applied by dip, brush or spray. Literature on recommended techniques for the proper application of coatings and the preparation of the subtrates is available upon request.

KESTER®
SOLDER

Technical Report:

PURITY AND MINIMAL OXIDATION IN BAR SOLDER

THE PROBLEM:

With the growing sophistication of the electronics industry came the need for purer, higher performance solders. Conventionally alloyed solder often suffers from unacceptable levels of oxidation and impurities, resulting in inconsistent appearance and performance. The cost of touch-ups and rejections is a problem for manufacturers of complicated electronic assemblies, printed circuit boards and substrates for microcircuitry.

THE CAUSE:

The conventional solder manufacturing process — pouring individual small bars - exposes large surface areas while the metals are in a molten state; this process promotes high levels of oxidation and contact with impurities in the ambient environment. Further opportunity for contamination arises in the handling of material by personnel.

A simple visual inspection of conventionally cast bar solder reveals discoloration, crystalline segregation and surface aggregates of oxides. A pound of such solder obviously cannot deliver a pound of pure performance.

"ULTRAPURE"
CONVENTIONAL CAST BAR

Inspection of Kester's "ULTRAPURE" will easily satisfy the most critical eye. "ULTRAPURE" is uniform and virtually flawless in appearance.

THE KESTER SOLUTION

In response to the purity requirements of the electronics industry, Kester developed "Ultrapure." This proprietary extrusion process results in a solder bar virtually free of metallic impurities, sulphur and oxides. The level of purity achieved in Ultrapure is far above that found in ordinary cast bars; furthermore, there is no segregation of metals in the extruded Ultrapure bar.

Using only virgin metals, Ultrapure solder is manufactured under the tightest quality control standards in the industry. A very large ingot is poured and inserted in a virtually air tight hydraulic press. Following automatic extrusion, Ultrapure is handled by gloved personnel to eliminate contact with body oils and salts.

Ultrapure's superior performance on the production line should result in substantial cost savings; it offers more connections per pound of solder, less dross on initial melting, reduced touch-up and rejection rates, superior fluidity and brighter connections.

Ultrapure is ideally suited for all modern soldering techniques. Write for more information.

Vydyne® Nylon Resins. The engineered thermoplastic line that tackles your toughest tasks.

Trust Monsanto to bring you the hottest line of engineering nylons anywhere. These rugged, lightweight, fast-molding engineering thermoplastic resins offer the features you demand in high-performance polymers.

VYDYNE FR GRADES. THE INDUSTRY LEADER IN PERFORMANCE AND PROCESSABILITY.

More and more of today's designs are requiring flame-retardant performance. And design engineers are turning to Monsanto. Monsanto developed the first commercially available FR nylon and continues to lead the industry with both reinforced and unreinforced grades. And this FR nylon line meets ratings of UL 94V-0 and UL 94-5V in thinner sections than competitive nylon grades. Typical applications are electrical connectors, cable ties, switches and coil bobbins.

VYDYNE 69 NYLONS. SUPERIOR DIMENSIONAL STABILITY FOR ELEVATED TEMPERATURE ENVIRONMENTS.

These resins exhibit low moisture absorption and consequently offer good dimensional stability. They are heat stabilized for elevated temperature service and lubricated for machine feeding in extrusion applications. The most common application is electrical wire jacketing.

VYDYNE 66 NYLONS. STRENGTH, STIFFNESS AND ELECTRICAL RESISTANCE IN ONE PACKAGE.

These general purpose resins represent the largest volume, most frequently specified type of nylon used. They combine strength and rigidity with electrical resistance and lubricity for easy molding. Typical applications are terminal blocks, cable ties and coil bobbins.

Vydyne nylon resins can meet the requirements of many of your toughest tasks. For a closer look at Vydyne specifications, simply turn the page. For further information call or write. You'll also find our address and phone number on the following page.

WRAPPABLE & SOLDERABLE TERMINALS & PINS

T44/T68 Mini-Wrap for 0.042″ Holes—Low profile wire wrappable terminals have slotted upper end for soldered wires. Ideal for miniature assemblies.

T49 Trifurcated Klip-Wrap—Unique three-fingered clip on upper end makes this a time-saving terminal for production or experimental uses. Spring clip holds leads from 0.018″ to 0.025″, 0.032″ or 0.040″ until soldered.

T46 Series Press-In Wrap Posts have rectangular base with stepped shank for better holding in 0.042″ holes.

T42-1 Miniaturized Compact Push-in fits 0.042″ dia. holes such as in "P" pattern Micro-Vectorbord and can be mounted on 0.1″ centers side-to-side. Tintillate plated. Ideal for IC work because leads can be laid in slots or pass through terminal vertically.

T28-Compact push-in terminals fit 0.062″ dia. holes in printed circuit boards and Vectorbord. Patterns, B, F, G, and H. Tintillate plated copper alloy.

T9.4-Push-in type fits 0.093″ dis. holes in printed circuit boards or Vectorbord "A" and "AA" patterns. Serrated teeth hold leads 0.032″ to 0.040″ in slots until soldered. Supplied with intillate plating for easy soldering.

P158 Spring Impact Tool accepts screw-in terminal die points listed above. When depressed, tool delivers sharp impact force to drive terminals into circuit board holes.

UNWANTED EMI
LEAKY CONNECTIONS ARE THE WORK OF THE DEVIL!
INTERFERENCE GIVES YOU STATIC
I HATE EMISSIONS
NOISE IS NOT A FOUR LETTER WORD

Some Grafitti Is Funny … Some Isn't!

Connectors and cables that emit spurious EMI are no laughing matter. That's why it's no small coincidence that more and more designers are specifying Shielded Cable Assemblies with Circular Din Connectors.

Switchcraft provides a versatile line of fully Shielded Cables for these applications. They feature Switchcraft's Circular Din Plugs with the exclusive one piece shell/shield. Shielded Mating Din Receptacles complete the system for EMI suppression to assist you in meeting the strict requirements of FCC 20780 Docket.

The molded plugs are sealed against contamination, designed with flex and strain relief to protect internal wire connections. Also offered are molded through-the-panel strain reliefs.

When it comes to Cables, Switchcraft can accommodate virtually your every need with complete capabilities to customize your cable in terms of style, color, wire size, type of shielding, even to molding your company logo or ID. In addition all our cable assemblies are 100% quality tested before they leave our plant.

So, if you'd like to beat the devil at his own game, why not fill out the Reader Service Card and we'll be happy to send you complete information. Or, if your needs are more pressing, contact: Mr. Dean Arvanitis/Ken Wood at (312) 792-2700.

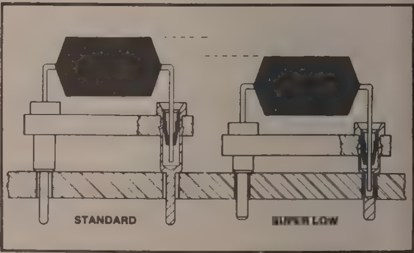
MOUNTING
HOLE P.T.H. OR
STANDARD .030 MIN. DIA.



New Hi-Rel Super Low Dip Socket with hollow-tailed terminal and .050 thick open-frame body allows for greater PCB packaging density. New terminal design utilizes standard PCB hole diameters. With IC leg sitting into the PCB, a decrease in the mounting height occurs. Super Low packaging can be obtained using our LS series body as shown, .062 thick glass epoxy for LSI sockets, Pin Grid Array sockets, and with our Mylar Throw Away Carriers in both Dual-In-Line and Pin Grid Array Patterns.

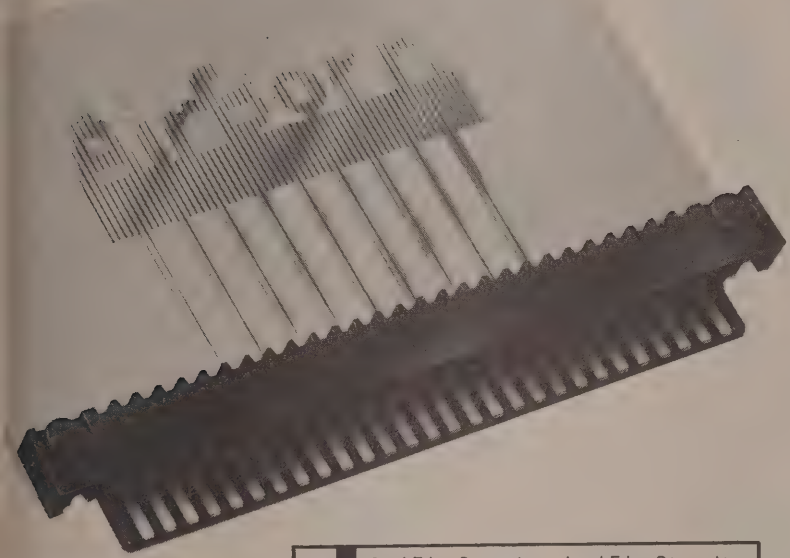
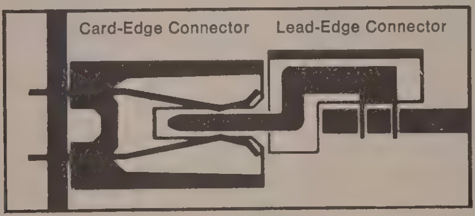
LEAD-EDGE™ CONNECTORS

- Designed as a daughter board component on a two-piece mated connector system.
- Compatible with most edgeboard connectors.
- Replaces gold plated fingers on printed wiring boards.
- Provides superior electrical and mechanical performance. Eliminates the variables which degrade the plated fingers approach in conventional edgeboard interconnections.





FEATURES

- Precision molded Lead-Edge connecting surface provides narrow tolerance of ±.003 on .066 thickness.
- Molded body and stamped contacts assure consistent and controlled forces for board insertion and withdrawal.
- Lead-Edge plug accepts various "thin" or "thick" daughter boards.
- Improved reliability of interconnection while using conventional edgeboard receptacle.
- Connector replacement can save expensive daughter board.
- Coplaner design permits retrofit with relative ease. Centerline of connector and PCB are conincident.
- Low plug cost can often reduce total costs by eliminating gold plated fingers and adding reliability.
- Connector may be assembled with other components on wave solder pass.
- Connector to board clearance enables maximum flushing for flux removal.
- Polarization or keying is available through contact or rib modification.
- Simple masking of gold plated contact surfaces facilitates assembly.
- Either plastic snap-in or standard #4 metal hardware (nuts and screws) is available.
- Eliminates costly gold plating equipment, inventory and personnel for circuit board fingers.
- Eliminates corrosive effects of plating bath fumes.
- Standard .125 centerline spacing applies.

MATERIAL SPECIFICATIONS

Contact Material: CA194 base metal, 30μ" gold minimum over nickel underplate.

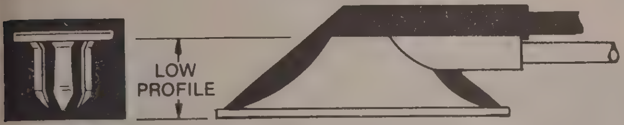
3228-RA SERIES CRT ANODE CONNECTORS

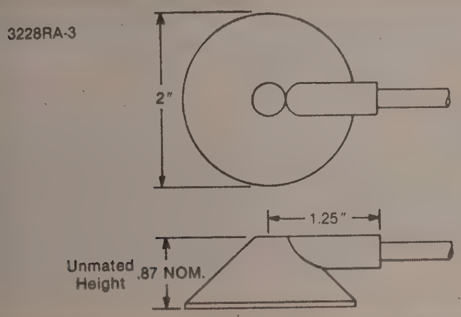
Alden's 3228RA-3 and -4 Series CRT Anode Connectors are designed to meet current demands for J1-21 style CRT receptacles with the following important features:

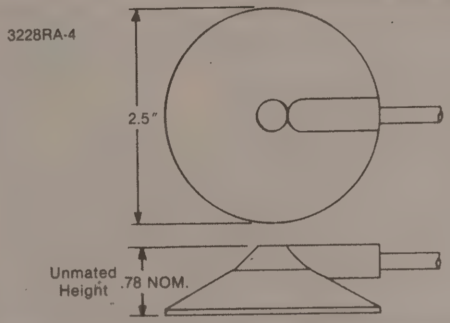
- High Voltage (to 40KVDC)
- Flame Retardant (UL 94-VO)
- Low Cost
- Low Profile
- High Flexibility



THE CAP — the 3228RA-3 and -4 Series takes advantage of the latest developments in flame retardant thermoplastic rubber to achieve a flexible low-profile seal that rivals silicones in performance, yet is low in cost.

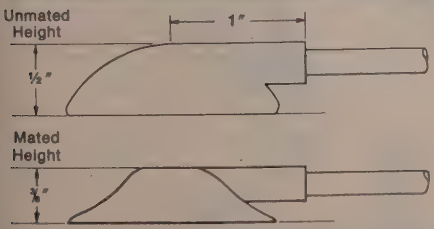
THE CONTACT — Alden's multi-prong contact insures a positive corona-free connection, plus easy removal and installation. Nickel plated spring steel guarantees long contact life.

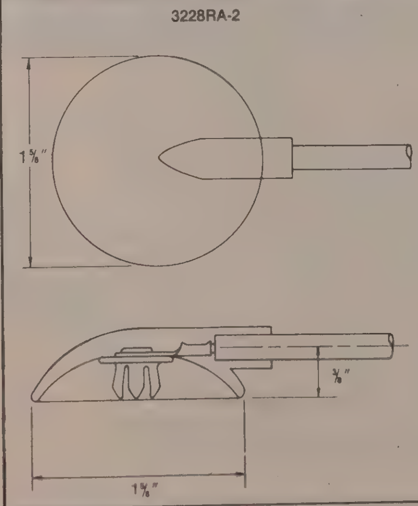




Alden's exclusive integral molding technique of directly molding onto lead wires maximizes high voltage performance. Standard wire is fully rated at 40 KVDC and meets UL 3239 VW-1 105°C. Other wires and configurations available upon request.

3228RA-2 SILICONE CRT ANODE CONNECTOR





NEW!

The 3228RA-2 is an integrally molded anode cap/lead assembly incorporating the same multi-prong positive contact used on the -3 and -4 models. The silicone rubber boot actually bonds to the wire insulation maximizing its high voltage performance. A super low profile allows this anode cap to fit minimum clearance applications where only potting epoxies could be used before.

Alden offers a variety of other anode connectors as well as CRT sockets. For additional information please contact our sales office directly.

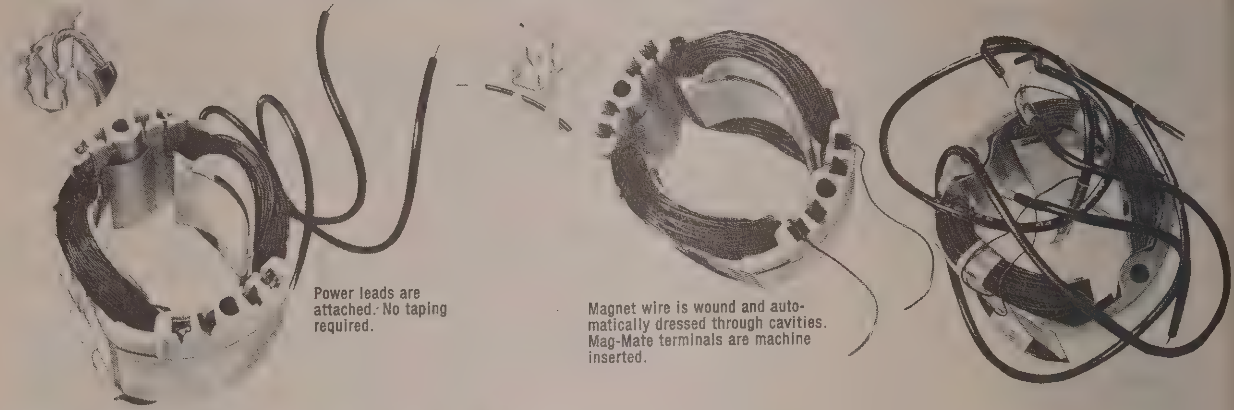
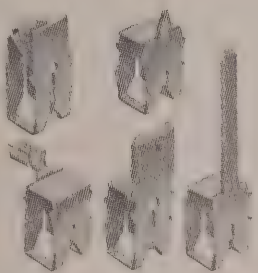
AMP Mag-Mate magnet wire interconnection system.



Power leads are attached. No taping required.

Magnet wire is wound and automatically dressed through cavities. Mag-Mate terminals are machine inserted.

The Mag-Mate interconnection system not only "evolutionizes" old production techniques but also aids design flexibility. With it you can interconnect aluminum magnet wire as well as cooper. And you can choose from a broad variety of terminals for power lead termination. They range from tabs and posts to wire crimp barrels; or just use stripped wire.



- Terminates either copper or aluminum magnet wire
- Terminates all magnet wire film insulations
- Eliminates need for pre-stripping conductors
- Automatically trims excess magnet wire
- Simultaneously terminates two wires of the same size in one terminal
- Eliminates post insulating
- Capable of producing up to 2000 terminations per hour
- May be mass terminated
- Clean metal-to-metal interface

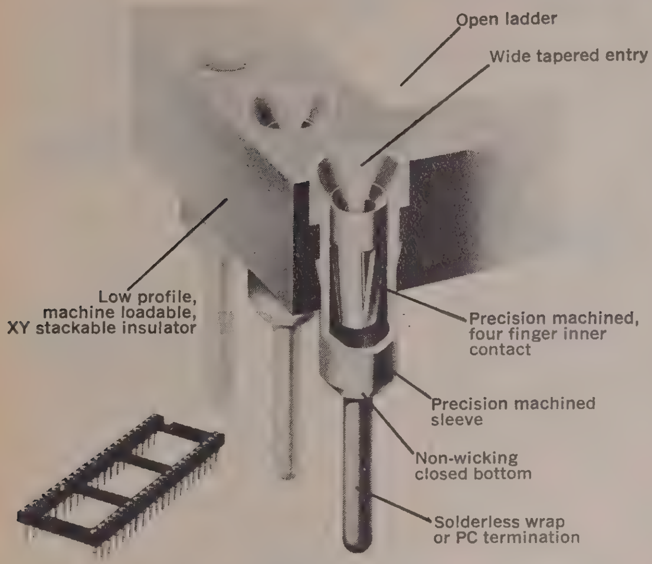
AUGAT® LOW INSERTION FORCE DIP SOCKETS 1000 SERIES

LEADERS IN INTERCONNECTION COMPONENTS



Open ladder
Wide tapered entry
Low profile, machine loadable, XY stackable insulator
Precision machined, four finger inner contact
Precision machined sleeve
Non-wicking closed bottom
Solderless wrap or PC termination

The Augat 1000 Series sockets offer **at least 50% lower insertion force** than comparable conventional dual-in-line constructions. **Yet unlike mechanically actuated LIF designs,** they're low profile, machine loadable, XY stackable — and have open ladder construction to facilitate board cooling, cleaning and inspection. So with the 1000 Series sockets, the many advantages of production dual-in-line sockets are available for a wide range of applications requiring low insertion forces and important wiping action.

- Precision machined to exact tolerances and optimum geometry, the four finger inner contact provides seamless, concentric funnel entry for easy, safe, low insertion force DIP socketing (.011″ x .018″ pin requires only an average 3.8 oz/line insertion, while maintaining 3.7 oz/line extraction).
- Consistent normal force of 110 grams per IC leg.
- Non-wicking, closed bottom, precision machined sleeve gives 100% protection against flux and solder contamination. Choice of wire wrappable or PC termination.
- Standard dual-in-line body offers greater production convenience and performance reliability than bulky, mechanically actuated LIF designs. Low profile. Machine loadable. XY stackable. Open ladder for cooling, cleaning and inspection. Applications from 8 to 64 positions.
- New thermoplastic polyester insulator material provides 50°F higher service temperature than standard PBT.

AUGAT®

PIN GRID ARRAY SOCKETS PPS SERIES

LEADERS IN INTERCONNECTION COMPONENTS

The Augat PPS series **reduces insertion forces by more than 50%** compared with conventional pin grid array sockets utilizing stamped and formed inner contacts. It's accomplished by a proven Augat inner contact concept refined to optimum geometry for high pin count packages. And it assures consistent normal force and important wiping action while protecting IC legs from damage.

- Precision machined, four finger inner contact provides seamless, concentric funnel entry for easy, safe, low insertion force socketing (.018" dia. pin requires only an average 3.4 oz/line insertion while maintaining 3.0 oz/line extraction).
- Consistent normal force of 80 grams per pin average.
- Non-wicking, closed bottom, precision machined sleeve gives 100% protection against flux and solder contamination. Choice of wire wrappable or PC termination.
- Low profile .062" thick glass epoxy insulator. Standard or optional for all sizes.
- Available in 64, 68, 72, 73, 120, 121, 148 and 149 positions on standard .100" grid centers. Custom construction on request.

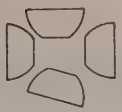
Seamless Machined



Distorted Stamped

Uniform mechanical performance compared to stamped and formed alternatives. Cut-away view (from bottom) shows how shearing forces during contact-to-sleeve assembly can damage stamped inner contact seams, distorting four-finger alignment. Augat machined inner contacts have no seams, they maintain symmetrical four-finger configuration to ensure uniform mechanical performance.

BEAU®

Thermoplastic Barrier Terminal Strips

BEND BARRIERS WITHOUT BREAKING

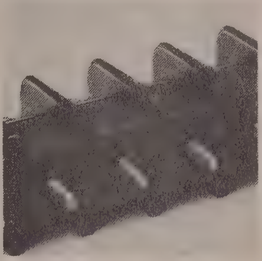
Beau barrier strips reduce breakage dramatically because they are made of highly resilient thermoplastic. Impact strength many times more than phenolics. Production line and in-field damage (and time-consuming rewiring) are virtually eliminated.

PROTECTS SOLDER JOINTS FROM DAMAGE

Terminals are ultrasonically imbedded in base (exclusive). Eliminates solder joint damage from torqueing screws, or from strain in dressing down wire bundles. Pull-out strength doubled.

TERMINAL TAILS ENCLOSED

Cavities are eliminated around dip solder terminal tails. Allows mounting on PCB without affecting circuit isolation. Eliminates entrapment of foreign matter. Reduces solder wicking.



U.L. RECOGNIZED.
CSA CERTIFIED.

HIGH AND LOW BARRIER STYLES

Only Beau offers both — and our high barriers offer maximum circuit isolation with the lowest overall height of any other high barrier brand.

CLOSED-SIDE STRIPS OFFER EXTRA PROTECTION

Series 75000 strips have closed side. Serves as wire stop. Permits mounting components close to barrier strip without shorting. Wires or screwdrivers can't pass through closed side to contact other wires, leads or PCB components.

20-AMP STRIPS IN SAME SPACE AS 15

Our 76000 and 77000 double-row strips are designed to take the same panel space as any double-row 15-amp barrier terminal strip.

HIGHEST U.L. FLAME RETARDANT RATING

Our thermoplastic material attains the highest flame retardant rating (self extinguishing) assigned by UL: 94V-0.

QUICK-CONNECT TERMINALS SAVE TIME

Beau quick-connect terminals speed assembly time, cut costs and improve connections. Cold solder joints are also eliminated.

NEAT, ACCURATE MOUNTING ENDS

All our thermoplastic strips are molded to length. None are cut down from longer strips. They're neater, without ugly saw cuts. And they are precisely the same length every time.

Pre-Grounding Connectors

3300 SERIES: 10 amps per contact
5400 SERIES: 15 amps per contact

PRE-GROUNDING FOR GREATER SAFETY

Beau gives you the greater safety of U.L. recognized pre-grounding plug and socket connectors. The extra long grounding contact engages before any other active contacts are mated. Available for chassis and cable mounting.

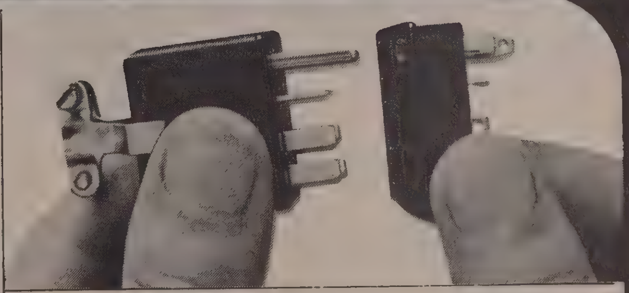
LOWEST INSTALLED COST

Only Beau offers the longer pre-grounding contact. Thus, you will never have to cut any contacts to a shorter length to achieve a safer connection. No more costly, time-consuming hand cutting operations.

CONTACT POSITION

In the 3300 Series, the grounding contact takes the place of a regular contact. Connector sizes 3324 through 3333 are already of the pre-grounding type, and there is no need to specify the grounding contact.

In the 5400 Series, the grounding contact is an additional contact position rather than taking the place of a standard contact.



SPECIFICATIONS

For other specifications and data, see next page.

Rating: 3300 Series, 10 amps per contact at 750 volts,
5400 Series, 15 amps per contact at 1750 volts.

Grounding contact rating: 30 amps at rated voltages.

No. of contacts: 3300 Series, 3 to 33 (incl. grounding contact),
5400 Series, 5 to 13 (incl. grounding contact)

Grounding contact: Extra long, heavy-duty plated brass.

Grounding contact tail: 5400 Series, mounted on an elevated creep path barrier that puts required distance between ground and active contacts.

Caton Connector Corona-Free Connectors & Assemblies For Over 36 Years, recognized for quality Design and Engineering

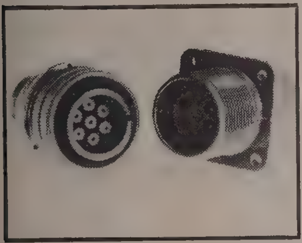
MODIFIED MS CONNECTORS

CCM Series

Positive contact screw-on connectors features self-centering tapered contours of molded resilient silicone inserts. They afford high dependability with their positive peripheral seal. The dielectric inserts are unaffected by temperatures in the range of −70°F to +400°F. They are ozone and corona resistant.

In addition to the single contact version, the CCM series come in 2, 3, 4, 5, 7 and 8 contact versions and have shell sizes ranging from 12 to 24. They carry voltage rates from 20 to 50 KVDC.

A line of accessories including protective caps and cable clamps are available throughout the ranges offered.



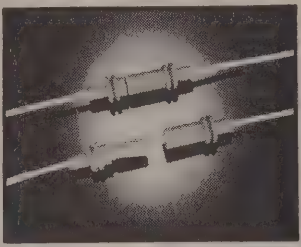
THE PM 105 FROM CATON

NEW

PM Series quality at lower cost

Designed for universal application in electronic and electrical engineering programs, these fully molded silicone connectors are ideal for marine and medical installations, automotive and business machine assemblies, aircraft and space technology.

The PM 105 series is vibration proof, watertight and waterproof, tested for underwater engineering projects, with high wear resistance capability. Connectors are manufactured with UL approved material, can be panel mounted, field assembled. 1000 to 5KV operating voltage. Available sheathed or unsheathed.

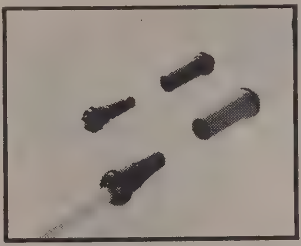


SILICONE IN-LINE CONNECTORS

PM200-PM300 Series

These all silicone positive end pieces snap together forming a watertight connection that can easily be disassembled or changed. The units are fully molded and offer high reliability and long life. The units are corona free and leak proof.

The PM 200 series is for 30 KVDC and the PM series is for 50 KVDC. Both series are available with grommet type ends for panel mounting or with optional finger grip.

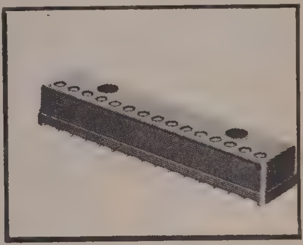


PRINTED CIRCUIT BOARD EDGE CONNECTORS

EC Series

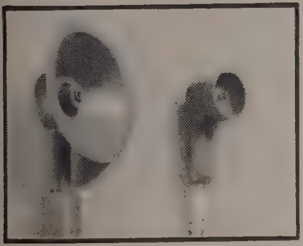
Caton manufactures literally hundreds of printed circuit board connectors including the entire line of H.H. Buggie products under a license agreement. The socket contacts are phosphor bronze with gold plating and are available in mineral filled diallyl phthalate or phenolic to meet the various MIL-M-14F type requirements. Each series comes with plugs and female receptacles.

Operating voltage is 250 volts AC RMS with a current rating of 5 amperes. Operating temperatures are −55°C to +125°C.



CATON

"We know what will work. . . and we have learned how many ideas will not work."



CRT ANODE LEADS

CCR Series

Caton CRT anode leads are leak proof and corona free. The lead assemblies are molded silicone with heat treated contacts. They offer excellent fire and heat resistance with ambient temperatures over 150°C.

The connectors adapt perfectly to JI-22 or JI-25 anode ball contacts. Capabilities range from 5 KV to 30 KV.

Manufactures under license from the Burndy Corporation
